Ms. Valerie's Learning at Home Activity
Make a Bowling Set

Related Math Lesson Airs April 27, 2021 on WQLN PBS

How to Make

Materials:

- 10 Plastic bottles (smooth sides if writing numbers)
- Permanent marker or computer printer and paper
- Tape and scissors (if taping numbers on bottles)
- Masking tape (for the floor)
- Ball

Directions:

1. Print out numbers 1-10 on a computer printer, cut out, and tape to bottles OR write numbers 1-10 on plastic bottles using a permanent marker. You could also write the numbers on paper and tape them on.
2. Find a ball from around your house (any ball will work).
3. Set up your bottles. Hint: You may want to use masking tape and mark the spots on the floor. You could even write the numbers on the tape so your child can match the numbers (masking tape is hard to remove if left more than a week).
4. Optional: If the bottles are hard for your child to stand up, fill with water, sand, etc. to make them more stable.
5. Have your child roll the ball to try to knock down the pins. Talk about what numbers were knocked down.
